### Practice - Markup and Discount

Complete each table. When necessary, round to the nearest cent.

Regular Price	Percent of Discount	Amount of Discount	Sale Price
\$46	25%		
\$35.45	15%		
\$174	40%		
\$1.40	30%		
\$87	50%		
\$675	20%		

Cost of item	Percent of Markup	Amount of Markup	Retail Price
\$5.50	75%		
\$25	50%		
\$170	85%		
\$159.99	70%		
\$12.65	90%		
\$739	20%		

- By buying 10 books, Fred gets a 20% discount on his purchase. The 10 books cost a total of \$67.50. Find the amount of the discount and the final price.
- Maria bought a special-edition comic book for \$4. Five months later, she sold it for \$12. Express her profit as a percentage.
- An online CD store charges 6% of your total charges as a handling charge. Julie orders \$22.50 worth of CDs from the store. How much will she pay for handling?
- Joe downloads a video clip from the Internet. After 1 minute, 20% of the clip has downloaded. At that rate, how long will the download take?
